A Part 107 Commercial Drone Pilot with a passion for compliance and technology.

Skills:

Front-End: HTML, SCSS, JavaScript, React

Back-End: C#, PostgreSQL

Source Control and Collaboration: Git, Github, Slack, Discord

Problem Solving, Communication, Leadership

Projects:

MuralBook: Employing the full-stack web development skills learned while at Suncoast Developers Guild, MuralBook was built using: HTML 5, SCSS, JS, React, C#, PostgreSQL. Mural Book was created after my wife and I had difficulty locating a few of the murals in the Tampa Heights neighborhood. I realized that having a database where you could preview the murals, discover the artists, and save your favorites would be a great way to get the community involved with the beautiful art that is all around us.

SuncoastOverflow (StackOverflow replication): Suncoast Overflow was a group project with Daniel Demerin and Stefan Bettaglio. We were tasked with creating a mobile version of StackOverflow so that a user could ask a question and view answers pertaining to coding. This project was very informative and allowed us to work on our source control after we developed a group review system for handling pull requests. Throughout this project we used git, github, and slack to coordinate our versions and work as a team for proper source control.

Octocat: After spending time learning C#, PostgreSQL, HTML, and CSS, we began learning javascript and react. At that point, this website was taken from a static mobile website that utilized only HTML and CSS to one that incorporated state and API calls. The octocats are stored in state after an API call is made, state is then mapped and passed to a component that renders each cat card.
